## Profile Summary

---

Experienced **Software Engineer** with 5 years in development and a solid track record of successful project delivery. Proficient in Java programming, **Data Structures**, and **Algorithms**, with over a year of demonstrated ownership in project execution and delivery.

Strong understanding of **Advanced AI technologies**, particularly **LLM prompt engineering** **RAG-Based**, **Agentic AI Multiple Agents**, and hands-on experience building applications using **HTML**, **CSS**, and **JavaScript With React Js**. Familiar with back-end architecture involving **HTTP**, **REST APIs**, **Micro Services**, and systems programming concepts like **Concurrency** and **Multi-threading**.

Adept at solving complex technical problems and collaborating effectively with cross-functional teams. Known for strong communication skills, adaptability, and a high level of ownership in fast-paced, dynamic environments.

## Skills

---

- **Programming & Frameworks:** Java, Spring Boot, Hibernate, Java-FX
- **Web & Frontend:** HTML, CSS, JavaScript
- **Database & Cloud:** MySQL, AWS
- **Architecture & Concepts:** REST APIs, Micro-services, Concurrency, Multi-threading, OOPS, Data Structures & Algorithms
- **AWS :** EC2, AWS Lambda, Open Search, API Gateway, Amazon Bedrock
- **Tools & Practices:** CI/CD Pipelines (GitHub Actions), Unit Testing, Agile/Scrum, Jira
- **AI & Generative Technologies:** LLM, AI integrations, Prompt Engineering, Agentic AI.
- **Languages:** English (Professional), Tamil (Native), Kannada(Begginer)

## Experience

---

**Software Engineer**      **Teclever Solutions Private Limited**      **Bangalore, India**      **MAR/2021 - Current**

- Design, develop, and maintain robust, scalable, and high-performance Java-based back-end applications. Implement complex business logic using appropriate data structures to improve application efficiency and performance.
- Diagnose and resolve performance bottlenecks in Java applications. Optimize algorithms and data access patterns for high-throughput and low-latency performance.
- Led end-to-end software development projects, including requirements gathering, design, implementation, and deployment.
- Implemented basic CI/CD pipelines using tools like GitHub Actions testing and deployment. Configured automated builds and tests triggered by code pushes and pull requests
- Collaborate with cross-functional teams including UI/UX, QA, DevOps, and product managers in Agile/Scrum environments. And participate in daily stand-ups, sprint planning, and retrospectives.
- Developed and maintained comprehensive technical documentation, including system design documents, API specifications, and testing procedures to support development, deployment, and maintenance activities.

## Projects

---

- **Data Acquisition System:** Designed and implemented a Data Acquisition System in Ubuntu using Spring Boot, Kafka, React JS Apache Tomcat Server facilitating real-time acquisition and visualization of analog, digital, and graphical data. Engineered functionality for continuous data storage in multiple files, enabling seamless analysis in a 24/7 operational environment.  
**Client:** M/s. Indian Space Research Organization - (IPRC), India.
- **Burso Cost Allocation System:** Designed and implemented a **Cost Allocation System** in Global Server using JAVA based Spring Boot, React JS to cost allocation solution for government accounting experts to provide accurate, efficient, transparent and defensible allocation of public funds  
**Client:** MGT Consulting -Florida, U.S.A
- **Data Handling Software System:** Developed a simulation host application in Ubuntu using JAVA and JAVA FX to simulate Aircraft equipment functionalities using digital and analog signals data. And data gathering on output and stored Database and generating various type reports  
**Client:** Bharat Electronics Limited (BEL) - Bangalore, India.
- **Burso Chat Bot:** Designed and integrated an AI-powered chatbot for a government-focused Cost Allocation System using **AWS Bedrock, AWS Lambda, and Amazon Open Search**. Implemented real-time conversational assistance, automated query resolution, intelligent financial module navigation, and context-aware response generation to enhance user experience and operational efficiency  
**Client:** MGT Consulting -Florida, U.S.A
- **LRU Testing Application:** Developed a **simulation host application on Ubuntu using Java and JavaFX** to emulate aircraft equipment functionalities with digital and analog signal inputs. Designed and implemented **LRU testing software modules** for validating aircraft subsystems and equipment interfaces. Built mechanisms for **Card and Signal Module, database storage, and automated report generation** for test results. Created and maintained **technical documentation, test reports, and user guides** to support testing and operational workflows.  
**Client:** Aeronautical Development Establishment, Bangalore, India

## Education

---

Bachelor of Engineering

2012 – 2016

AS-Salam College of Engg & Tech

CGPA – 6.52

Aduthurai, TamilNadu
